## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Liang et al. (Liang), U.S. Patent 6,649,037.

Liang discloses an electrodeionization apparatus comprising a plurality of anion and cation membranes arranged between an anode and cathode to form concentrating and desalting compartment, wherein the filling ratio of anion to cation in the concentrating compartment is higher than the filling ratio in the desalting compartment (see Examples 1-3 in columns 14-16). The reference further discloses the use of ratio of water introduction that meets the claimed range (See col. 15, lines 15-18).

*Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 2-3, 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liang et al. (Liang), U.S. Patent 6,649,037 applied as above.

The reference does not disclose the specific range of ratios, or exact type of resin or the effective area relative to the concentration.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Liang patent with the

teaching contained therein, because one having ordinary skill through routine design considerations, such as liquid being treated, to obtain the electrodeionization apparatus.

*Response to Arguments*

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
